

There are two types of accounts you can create or use to setup a YouTube channel. The first is with your school Google Account and the second is a personal Google Account. Remember if you use a personal Google Account you are responsible for any content posted from that account that reaches your class. You will also have to switch to that account when uploading videos to that channel. The best method and recommended method is to use your school issued Google Account to sign into YouTube and setup a YouTube channel.

First you need to go to YouTube.com. If you have already signed into your School Google account, when you visit YouTube you will automatically be signed in.

Next you should click on the user icon circle in the top right (the c icon below). Here you should select 'Creator Studio'.

This will take you to either a page that says 'Create Channel', or a page that says it may take up to 24 hours to build your channel. Once your YouTube studio account populates (either by seeing the page below or after the 24 hour period if indicated) you should click on this and follow the instructions through.

Use YouTube as...

C

Coretek

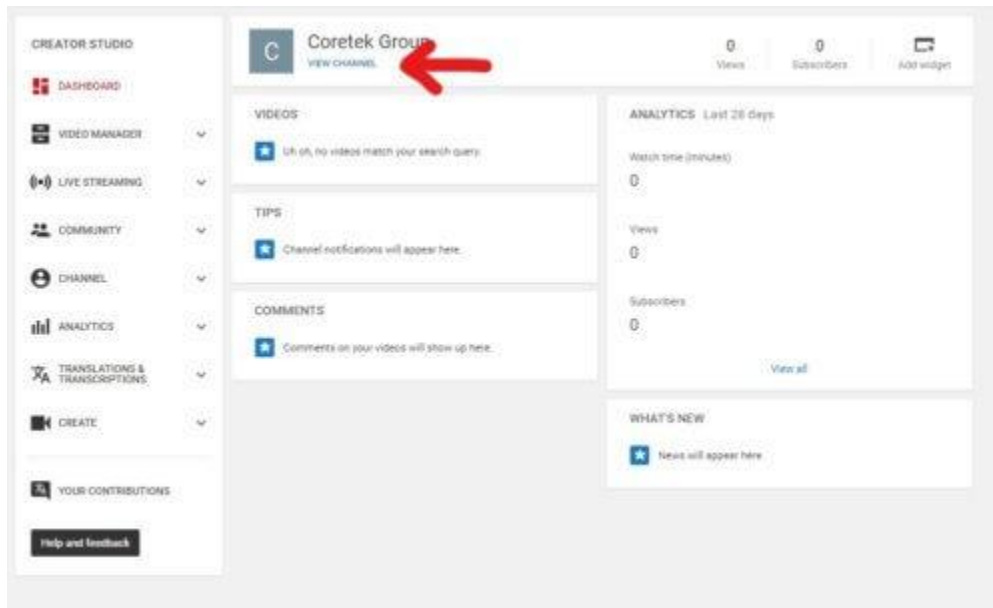

Group

By clicking "Create channel", you agree to [YouTube's Terms of Service](#). [Learn more](#)
Changes you make here may show up across Google services with content you create and share, and to people you interact with. [Learn more](#)
[Use a business or other name](#)

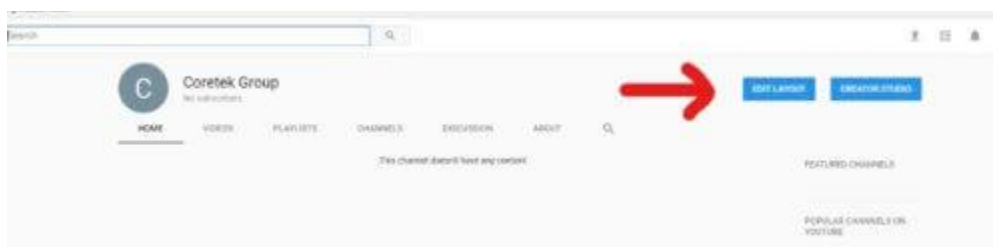

CANCEL

CREATE CHANNEL

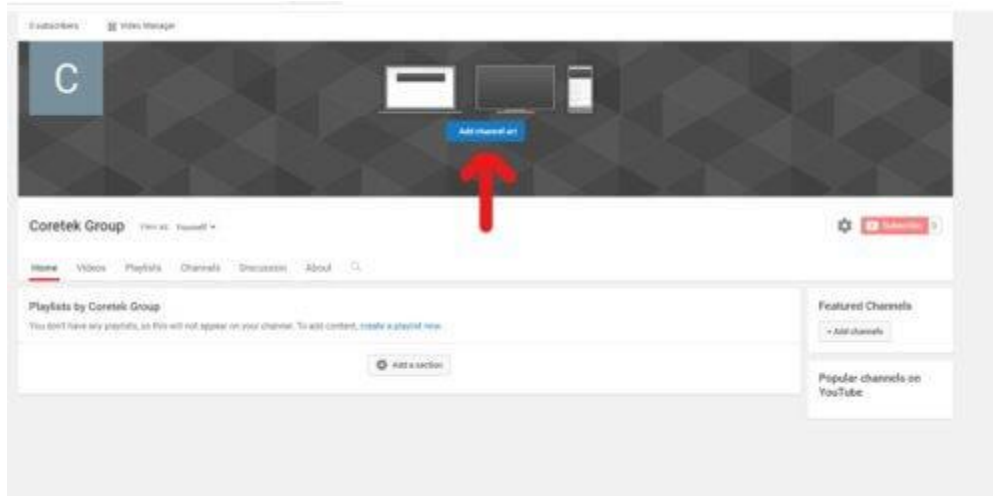

You will then see the below Creator Studio Dashboard. You need to click onto 'View Channel' which you will see just below the name of your channel.

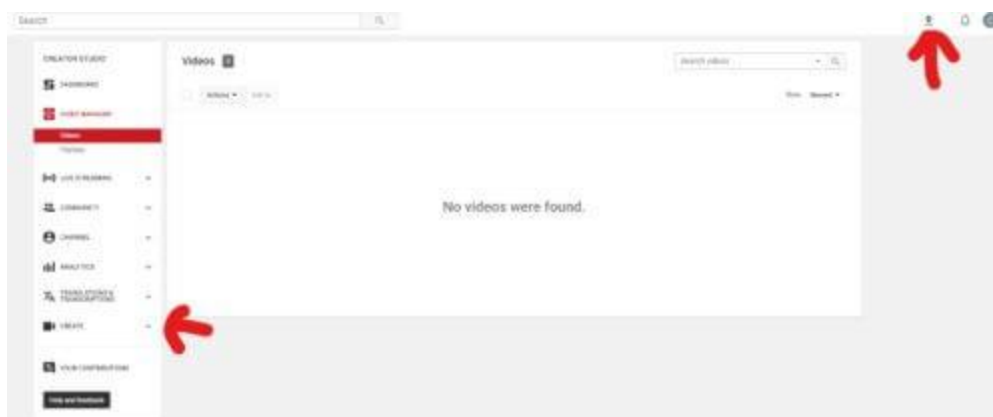

You should then select 'Edit Layout'.

Then, you will see the below image. This is your channel which you can customize how you wish. We would advise branding it to your school with your logo and school colors or design to reflect your class as well as a description of your school/class.

At the top of the dashboard you will see 'Video Channel' and this will take you to a screen where you can upload a video by clicking the upload button in the top right corner next to the bell notification icon. This will upload a video you have previously made. Or you can select 'create' which is one of the options on the menu on the left of the screen. This will enable you to create a video straight into YouTube.

You will also have the option to make these videos Public, Private, Unlisted and Scheduled which gives you the power over who you want to be able to see these videos. You are also able to turn comments on and off. Once the video has uploaded, you can add a title, description and tags. Then select the 'publish' button and the video will go live.

How can I make YouTube safer for my students?

If your students are going to be accessing YouTube on their own in your classroom there are a few measures that you can take in order to make it safer for them. Restricted Mode is YouTube's current parental control offering. It filters out content that has been flagged as bad or branded for adults by the creator. However, YouTube has stated that this will not always be 100% effective at filtering out the bad stuff. Any school issued device has a content filter deployed that forces this setting for the students. If you are using a personal device, to gain access you should log in to your google account, which you created in the previous step. Then visit YouTube.com and click on the icon in the top right corner. On this menu you will see the words 'Restricted Mode: Off'. If you click on this you will see a toggle to enable Restricted Mode. You will be prompted to enter your password. This will lock the restricted mode to this browser only. So if you may be using other browsers then you may want to do this to each one. (Example Chrome, Firefox, Edge)
